Supervised classification applied to vegetation mapping in the Barão de Melgaço municipality (Mato Grosso state, Brazil), using MODIS imagery

A SAR fine and medium spatial resolution approach for mapping the Brazilian Pantanal

Methodology for systematical mapping of annual crops in Mato Grosso do Sul state (Brazil)

The Negro's fan and its paleoenvironmental changes in the quaternary, southeast edge of Pantanal Mato-Grossense (Brazil)

The use of geotechnology, as a proposal for the dissemination, interactivity, and knowledge about the Pantanal biome, in elementary school

Evaluation of reduction of Pantanal wetlands in 2012

Classification of pasture degradation levels in terms of hydric erosion risk in quartzipsamments areas at Alto Taquari watershed (MS/MT, Brazil)

Analysis of the vegetation phenology from the Alto Paraguai basin throught the representation of harmonic cycles of EVI/MODIS time-series

Spectral response variations as indicators of seasonal floods in Pantanal using SPOT-VEGETATION time series

Surveying the topographic height from SRTM DATA for canopy mapping in the brazilian Pantanal

Upgrade of water resources maps from Mato Grosso do Sul state using geotechnologies

Automatic extraction of rivers in satellite images using geometric active contours

Susceptibility to water erosion of soils from the municipality Salto do Céu, SW Mato Grosso state, Brazil – Brasil

Landscape elements, water resources and ecosystem services: their relations to losses and gains in a Pantanal region
